

# bath-bst: Harvard referencing style as recommended by the University of Bath Library

Maintainer: Alex Ball\*

Package v3.2 – 16 January 2020

## 1 Introduction

The data model offered by the standard Bib<sub>T</sub>E<sub>X</sub> styles, and even the extended `natbib` variants, is not really rich enough to support the nuances of the Harvard (Bath) style. This means design decisions have to be made about whether to attempt some level of compatibility with other styles or craft something utterly unique.

In the first version of `bath-bst`, the intention was to set things up so that, if the same `.bib` file was used with a different style, the features peculiar to the Harvard (Bath) style would be ignored and the remaining information would come out in a sensible arrangement. The recommendations of the style’s documentation were to use the standard entry types as much as possible (though more semantic aliases were provided), and minimal new fields were introduced. For the more exotic (in Bib<sub>T</sub>E<sub>X</sub> terms) demands of the style, extensive use was made of the (standard) `note` and (non-standard) `titleaddon` fields to place information properly. If you have written a `.bib` file according to the principles in that first version, the `bath` style will still work as advertised for you.

The second version introduced a new variant, `bathx` (‘Bath extended’), which has a different aim. The idea with this one is that `.bib` files written for this style will be rendered just the same by the companion `biblatex-bath` style. Where possible, features from the latter have been emulated for Bib<sub>T</sub>E<sub>X</sub>; otherwise, the ‘cheats’ used in this style will also work under `biblatex`.

Happily, it has been possible to do this while keeping most of the code in common. The main differences between two versions are as follows:

- In `bath`, the `titleaddon` field is printed bare, while in `bathx` it is wrapped in square brackets.
- In `bathx` online items are marked with ‘[Online]’ automatically, while in `bath` you have to mark them thus yourself.
- In `bathx` undated items are marked with ‘n.d.’ automatically, while in `bath` you have to give ‘n.d.’ as the value of `year` yourself.

One other change worth noting regards URL access dates. In version 1, the advice was to put them in `urldate`. With version 2 the advice is now to put them, perhaps counter-intuitively, in `urlyear`. The reason is that `biblatex` will complain if the value of `urldate` is in the wrong format, but will happily print the contents of `urlyear` literally. If you don’t care about `biblatex` compatibility, you can continue to use `urldate`.

This document provides a suite of examples that demonstrate and test the bibliography format that was recommended for version 1.0 of the style.

## 2 Using the style

To use the style, add these lines to your preamble:

---

\*To contact the maintainer about this package, please visit the repository where the code is hosted: <https://github.com/alex-ball/bathbib>.

```
\usepackage{natbib}
\newcommand*{\urlprefix}{Available from: }
\newcommand*{\urldateprefix}{Accessed }
\bibliographystyle{bath}
```

Remember also to specify your .bib file at the end of the document:

```
\bibliography{file}
```

To make a citation in the text, use the key that corresponds to the entry in your .bib file:

```
While collections can be supplemented by other means \citep{williams1997edd},
the absence of an invisible collection amongst historians is noted by
\citet[p.556]{stiegl1981inh}. It may be, as \citet{burchard1965hhl} points out,
that they have no assistants or are reluctant to delegate, or it may be
down to economic factors \citep{adams2009tc1, adams2014tc2, gb.pa2014,
adams2017tc3}\dots
```

While collections can be supplemented by other means (Williams, 1997), the absence of an invisible collection amongst historians is noted by Stieg (1981b, p.556). It may be, as Burchard (1965) points out, that they have no assistants or are reluctant to delegate, or it may be down to economic factors (Adams, 2009, 2014; Pensions Act 2014; Adams, 2017)...

Please refer to the documentation for `natbib` for the full range of commands available for in-text citations. Be aware that the `natbib` option `sort` will sort citations in bibliography order, rather than the chronological order demanded by Harvard (Bath) – so don't use it!

## 2.1 Migrating from version 2 to version 3

If you have previously used version 2 of the style, you may need to update your .bib file to accommodate the following changes in version 3:

- Journal titles are now coerced to sentence case, so any capital letters you want to keep need to be protected with braces.
- Entries of type `unpublished` are now marked as unpublished. If you have been using this for an item that should not be marked as unpublished (e.g. archive photographs, law reports), you can use `booklet` instead: this is the other entry type (along with `misc`) that has a `howpublished` field instead of a `publisher`. Other entry types may work as well; indeed, some examples below have been updated to use `manual` or `report` instead.
- Some changes to the Harvard (Bath) style cannot be applied automatically (e.g. the update to how standards are referenced), so you may need to update your .bib file accordingly.

## 3 Examples

The examples below are shown in three parts. The first, marked with , shows an extract from the *Referencing guide: Harvard Bath* or *Referencing images*. The second, marked with , shows the reference as formatted by BibTeX. The last shows how the reference was entered in the .bib file. The bottom right corner shows the source of the example: 'RX' indicates the 'Reference examples (A-Z)' section of the Guide; 'RL' indicates the 'Organise a reference list' section of the Guide; 'RI' indicates *Referencing images*.

Some examples are highlighted in orange. This indicates that some fields have been 'abused' to achieve the right effect; in other words, they contain information that does not conform with their intended use. Some others make use of the `note` and `titleaddon` fields to achieve the right effect, where other styles might need the information placed differently. Particular care should be taken with such items when switching between different styles, though of course any item might need adjustment to take account of differing conventions.

🔑 With most styles, you would put ‘in press’ or ‘preprint’ as the `year` for articles that have yet to be officially published, but for this style you need to put it in `volume`. If you would rather lose this information when switching to a different style than have it incorrectly placed, you can use the `pubstate` field from `biblatex` instead. Use the keyword `inpress` for ‘in press’ and `inpreparation` or `submitted` (whichever is more accurate) for ‘preprint’.

```
pubstate = {inpress},

## Preprint in a digital repository

🔑 The Harvard (Bath) style gives you a choice whether to treat preprints as pre-publication articles (above) or as grey literature (below). In the latter case, the `techreport` entry type is the best match semantically.

## Work in a non-Roman alphabet

- 💡 The following example tricks BibTeX into treating the original rendering of the author's name as the 'von' part of a Roman-alphabet name. This requires the use of a command that simply gobbles its argument, which you have to define yourself:

```
\newcommand*{\noop}[1]{} 
```

For the trick to work, the argument you give to `\noop` must be lowercase, but otherwise it can be anything you like.

📖 Hua, L. 華林甫, 1999. Qingdai yilai Sanxia diqu shuihan zaihai de chubu yanjiu 清代以來三峽地區水旱災害的初步研 [A preliminary study of floods and droughts in the Three Gorges region since the Qing dynasty]. *Zhongguo shehui kexue* 中國社會科學, 1, pp.168–79.

RX

💡 If the name is due to appear initial first (e.g. after ‘In:’), you can append the non-Roman characters to the author’s surname; to do this, use inverted name order as you would for English double-barrelled names without hyphens, e.g. Hua 華林甫, Linfu.
