Package \texttt{plarray} v0.1h

Hironobu Yamashita

2018/10/27

This package \texttt{plarray} provides small patches to \texttt{array} package (latex-tools bundle) for use with Japanese \LaTeX/\upLaTeX. By loading \texttt{plarray} in addition to/instead of \texttt{array}, you can avoid conflicts between (u)\LaTeX kernel and \texttt{array}\footnote{Below is recent changes introduced to \LaTeX/\upLaTeX kernels by Japanese \TeX Development Community, which cannot cope with \texttt{array} package:

\begin{itemize}
  \item Remove extra \texttt{\xkanjiskip} around tabular environment
  \item Inhibit JFM (Japanese \TeX font metric) glue around tabular cell components
\end{itemize}
The package \texttt{plarray} re-adds these changes to \texttt{array}.}

If you are going to use both \texttt{plext} and \texttt{array} packages on \LaTeX/\upLaTeX, the easiest way is to use \texttt{plextarray}; please refer to its document.

This package is part of platex-tools bundle:

\url{https://github.com/aminophen/platex-tools}

\documentclass{jarticle} % if you are using \LaTeX, 
\usepackage{plarray} % load this!
\begin{document}

\begin{tabular}{|>{$}c<{$}|c|}
\hline
\exp(x) & わ
\hline
\log(x) & わ
\hline
\end{tabular}%

\end{document}
