ElegantNote: An Elegant \LaTeX\ Template for Notes

Dongsheng Deng
Elegant\LaTeX\ Program

Version: 2.30
Update: April 12, 2020
1 ElegantNote Instructions

The brand new ElegantNote is redesigned on the basis of \LaTeX\ article, a more elegant note template! You can use either pdf\LaTeX\ or X\LaTeX\ to compile\(^1\). It is recommended that pdf\LaTeX\ be used for notes in English while X\LaTeX\ be used for notes in Chinese.

The new template has the following features:

- two modes: good for eye mode (geye) and hazy mode;
- different devices: Pad (default), Screen(beamer size), Kindle, PC (double-page) and normal (A4);
- 5 color themes: blue (default), green, cyan, sakura and black;
- languages support: Chinese (default), English;
- support pdf\LaTeX\ and X\LaTeX;
- prettier captions, list environments, and unified fonts;
- custmized global font size: 8pt, 9pt, 10pt, 11pt, 12pt, 14pt, 17pt and 20pt;
- support for math font options for newtx and mtpro2;
- with the option of bibstyle (default: apalike) for changing style of bibliography;
- change the citation style with cite option: authoryear, numbers and super.

This update is to resolve \TeX\ Live 2020 compilation errors caused by gbt7714 compatibility issues.

\(^1\)The test environment is Win10 + \TeX\ Live 2019.
1.1 Optional Modes

This template provides optional modes: good for eye mode (geye) and hazy mode, while the paper color is green for the former and light blue for the latter. You can use the following code to activate the desired mode:

\documentclass[geye]{elegantnote} % or
\documentclass[mode=geye]{elegantnote}
\documentclass[hazy]{elegantnote} % or
\documentclass[mode=hazy]{elegantnote}

Remark If you are expected to customize background, use:

\definecolor{geyecolor}{RGB}{199,237,204}
\pagecolor{geyecolor}

1.2 Device Options

To make the notes more comfortable to read, we designed four output options (of different sizes) that correspond to different reading devices: Pad (default), Kindle, PC and A4paper.

New: For the convenience of notes presentation, version 2.20 offers a new option for device, i.e. device=screen, which is similar to the size of MS Powerpoint with ratio aspect of 4:3 (2019/12/06).

The options of output for different devices are
1.3 Math Fonts

This template defines a new option (math), with three options:

1. math=cm (default), use \LaTeX \text{default math font (recommended).}
2. math=newtx, use newtxmath math font (may bring about bugs).
3. math=mtpro2, use mtpro2 package to set math font.
1.4 Color Themes

This template contains 5 color themes, **green**, cyan, blue (default), sakura and black. If you don't need color, you can choose black theme. The color theme is enabled in the same way as before:

\documentclass[green]{elegantnote}
\documentclass[color=green]{elegantnote}
\documentclass[black]{elegantnote}
\documentclass[color=black]{elegantnote}

1.5 Languages

This template contains two sets of language environments, changing the language environment will change the title of table/figure (figure, table), article structure words (such as the table of contents, references, etc.), and the environment introductory words (such as Theorem, Lemma, etc.). The different language modes are enabled as follows:

\documentclass[en]{elegantnote}
\documentclass[lang=en]{elegantnote}
\documentclass[en]{elegantnote}
\documentclass[lang=en]{elegantnote}

---

2 Test for chapter footnote.
Note Chinese characters are allowed in Chinese mode only. To type in Chinese characters in English mode, please include \texttt{ctex} or \texttt{xeCJK} package.

1.6 Theorem Class Environments

This template used the \texttt{amsthm} to create theorems, there are 4 types of theorem environments

- **Theorem-Class**: theorem, lemma, proposition, corollary;
- **Definition-Class**: definition, conjecture, example;
- **Remark-Class**: remark, note, case;
- **Proof-Class**: proof.

Remark With the option \texttt{lang=cn}, the introductory words of the theorem class environments will be changed to Chinese.

2 Writing Sample

We will define the integral of a measurable function in three steps. First, we define the integral of a nonnegative simple function. Let $E$ be the measurable set in $\mathcal{R}^N$.

Definition 2.1 (Left Coset) Let $H$ be a subgroup of a group $G$. A left coset of $H$ in $G$ is a subset of $G$ that is

---

\footnote{Please use \texttt{scheme=plain} to retain headlines in English.}
of the form \(xH\), where \(x \in G\) and \(xH = \{xh : h \in H\}\). Similarly a right coset of \(H\) in \(G\) is a subset of \(G\) that is of the form \(Hx\), where \(Hx = \{hx : h \in H\}\)

Note that a subgroup \(H\) of a group \(G\) is itself a left coset of \(H\) in \(G\).

**Lemma 2.1 (Size Of Left Coset)** Let \(H\) be a finite subgroup of a group \(G\). Then each left coset of \(H\) in \(G\) has the same number of elements as \(H\).

**Theorem 2.2 (Lagrange’s Theorem)** Let \(G\) be a finite group, and let \(H\) be a subgroup of \(G\). Then the order of \(H\) divides the order of \(G\).

**Proof.** Let \(z\) be some element of \(xH \cap yH\). Then \(z = xa\) for some \(a \in H\), and \(z = yb\) for some \(b \in H\). If \(h\) is any element of \(H\) then \(ah \in H\) and \(a^{-1}h \in H\), since \(H\) is a subgroup of \(G\). But \(zh = x(ah)\) and \(xh = z(a^{-1}h)\) for all \(h \in H\). Therefore \(zH \subset xH\) and \(xH \subset zH\), and thus \(xH = zH\). Similarly \(yH = zH\), and thus \(xH = yH\), as required.

Regression analysis is a powerful statistical method that allows you to examine the relationship between two or more variables of interest. While there are many types of regression analysis, at their core they all examine the influence of one or more independent variables on a dependent variable. The process of performing a regression allows you to confidently determine which factors matter most, which factors can be ignored, and how these factors influence each other.

Let’s continue using our application training example. In this case, we’d want to measure the historical
Figure 1: Matplotlib: Scatter Plot Example
levels of satisfaction with the events from the past three years or so, as well as any information possible in regards to the independent variables.

3  Recruit Support Members

Recruit support members for Elegant\LaTeX{} to translate template official guide, maintain wiki entries, update Wechat articles. No deadline for this recruitment.

So far, Elegant\LaTeX{} has four support members:

- OG Translator: YPY;
- Wiki Maintainer: Ingo Zinngo, Xiaohao890809;
- QQ Group Manager: Sikouhjw.

Thank them all!!!

4  Acknowledgement

The number of stars on GitHub for ElegantPaper reached 176 on April 12, 2020 at the release of ElegantNote v2.20. Thank China\TeX{} and \LaTeX{} studio for their promotion.

If you like our templates, star on GitHub.

5 Donation

To express your love for our templates and/or our developers, please do not hesitate to tip us.

The explanation right of the tip usage belongs to Elegant\LaTeX with no supervision. Feel free to tip us. Those who donate more than 10 RMB will be recorded in the donation list and will receive a donation certificate. Thank all the tippers!
