href-ul: \LaTeX\ Package
That Makes Underscored Links

Yegor Bugayenko

0.1.0 2021/06/13

This package helps you make your hyperlinks underscored:

\documentclass{article}
\usepackage{href-ul}
\begin{document}
Go to \href{https://google.com}{Google}!
\end{document}

Changing the \textcolor{blue}{color} of the text also changes the color of the line.
Changing the \textsize{size} of the text doesn’t change the width of the line.
The package uses \texttt{hyperref} and \texttt{ulem} packages.
More details about this package you can find in the \texttt{yegor256(href-ul)}
GitHub repository.
