The setspace Package*

Geoffrey Tobin Robin Fairbairns

2022/12/04

Usage:

\documentclass[...]{...}
\usepackage{setspace}

This package (originally based on the \texttt{doublespace} \LaTeX{} 2.09 style option (package), created by Stephen Page) provides commands and environments for doing double and one-and-a-half spacing based on the font size.

Single spacing is the default.

The commands \texttt{singlespacing}, \texttt{onehalfspacing}, and \texttt{doublespacing}, are for use in the preamble to set the overall spacing for the document. If a different spacing is required then the \texttt{\setstretch{baselinestretch}} command can be used in the preamble to set the baselinestretch appropriately. The default spacing with this style option is single spacing.

Three environments, \texttt{singlespace}, \texttt{onehalfspace}, and \texttt{doublespace}, allow the spacing to be changed within the document. Both the \texttt{onehalfspace} and \texttt{doublespace} environments are intended to increase the spacing, so the \texttt{onehalfspace} environment should not be used in a double spaced document.

If an increased spacing different from one-and-a-half or double spacing is required then the spacing environment can be used. The \texttt{spacing} environment takes one argument which is the larger baselinestretch to use, e.g., \texttt{\begin{spacing}{2.5}}.

\texttt{\footins} is adjusted in the same ways \texttt{\parskip}.

\begin{quote}

This is a quote, with single spacing.

---

Another line.

---

And yet another line.

---

This is the end of the quote.

\end{quote}

---

This is not part of the quote.

---

And this is the final line of the example.
