to-be-determined: \LaTeX Package for highlighting places that require more work

Yegor Bugayenko

0.1.2 2021/09/22

This package helps you highlight places in your articles and make sure it looks nice. Install it from CTAN and then use like this:

\documentclass{article}
\usepackage{to-be-determined}
\begin{document}
The budget is \texttt{\tbd{99.00 USD}}.
\end{document}

If you want to hide the content of what’s inside \tbd, use \texttt{hide} option of the package. They will all be replaced with \texttt{TBD} placeholders.

If you want them to disappear entirely, use the \texttt{off} package option.

More details about this package you find in the \texttt{yegor256/to-be-determined} GitHub repository.
